GL circular motion mirror

GL running light

	GL circular motion mirror	GL running light
EFFECT	Circular Motion Mirror	Running Light
SPECIFICATIONS	An electronically controlled mirror moves the motif on a circular path. The radius and the turning direction can be individually adjusted to the spatial situation, the velocity is continuously variable. For the viewer, the motif remains at the same angle, so the texts and graphics do not appear upside down.	The projected image moves on a straight line in a single direction. Speed and direction can be adjusted.
INPUT VOLTAGE	12 V AC / 15 V DC	12 V AC / 15 V DC
